

The Partition Wall

**Making the space for success.
And we've been doing so for over
125 years.**

feco partition wall systems have a clear design language and their design has a decisive influence on the internal impact of a building. They create spatial solutions that connect with the given architecture. The fact that using our feco system you can react flexibly to changes in your company is another big plus. New spatial requirements can be implemented without material loss – if necessary during ongoing business operations.

But that's not all: feco also offers the highest level of technical perfection, be it with respect to the fulfilment of demanding noise and fire protection requirements or the low maintenance requirements. Our clamping system provides first-class sound insulation and excellent statics. With feco all you need is one thing – space.

Open

for the future.

With the future
in mind.

The **feco**-forum. Our imagination space.

3,500 m² of exhibition space

Even though the photographs on these pages might convey a first impression, they cannot replace a visit to our showroom. The architecture of the feco-forum fascinates with the spatial experiences of an exceptional exhibition building. In realistic office rooms we present the complete product range of the feco partition wall system. Future you can touch.

Experience our partition wall systems at feco-forum Karlsruhe – our lively marketplace for architects, planners, builders, investors and users looking for the right spatial solution.

**Relocatability
without material loss**

**Perfection
in detail**

**Fulfilment of the
highest constructional
requirements**

**Versatility
and compatibility**

**Optimized
room acoustics**

**System-integrated
solutions**

Partition walls

create spaces.

The **feco** system. Visible perfection.

feco partition wall systems are as individual as your project.

System partition walls are lightweight, non-load-bearing, unitized and removable interior walls with closed and transparent surfaces made of wood, glass and metal. They consist of a metal substructure and two-sided cladding with intermediate insulation as well as glazings and doors. The wall elements are prefabricated building-specific at the factory and assembled on site in short, clean assembly processes.

feco system partition walls meet the highest construction-related requirements in terms of sound insulation, sound absorption, fire protection and statics.

Add to this, the wide-ranging design options. In addition to a wide variety of surfaces, the feco system offers a wide range of glazing options for every requirement and every taste.

The big advantage of the feco system partition walls is their relocatability.

In conjunction with an element system matched to the building grid, rooms can be subsequently adapted to requirements, walls installed and removed or doors exchanged for wall elements – if desired, even during ongoing business operations. The additional investment compared to drywall walls usually pays for itself with the first conversion measure.

The partition wall elements – whether solid wall, glazing or door units – all have a basic wall thickness of 105 mm. Door and glass frames are face-flush with the closed wall elements and separated by 6 mm shadow joints. The only exceptions to this wall thickness are the recessed-designed fecoplan glazings and the special design variants with wall thicknesses of 125 mm and 175 mm respectively for exceptional static and acoustic requirements.

All fastenings are concealed as standard. Screw connections or other point connections are not visible, neither in the closed wall elements nor in glass walls. Connections to the floor, wall and ceiling have recessed shadow joints. The ceiling connection has a standard telescopic design to accommodate construction tolerances and structural movements.

One special aspect of the feco partition wall system is the way in which the wall panels are connected to the substructure.

In the patented feco clamping system, wall panels are clipped into the system uprights using the full-length, reverse-mounted steel retaining rails. This method provides more stability, more accurate joint alignment and increased sound insulation values compared to structures with only point fixture. The wall panels contribute to high static strength across their entire surface area, while the slim system uprights reduce the transmission of sound waves.

Wall heights of up to 5,000 mm, sound insulation values up to $R_{w,P} = 52$ dB, and fire resistance ratings up to 90 minutes with a uniform wall thickness of 105 mm are possible, as proven by numerous test reports, test certificates and approvals.

Please contact us for more information on how we can individually meet your specific requirements.

Flexible

into the future.

fecowand.

The solid wall.

Its versatility makes the partition wall a classic.

Melamine, laminate, veneer, textile or metal, standard or high sound insulation, with or without fire resistance – whatever version you select, the visual impression is perfect. The same applies to the acoustic quality, because even the basic version of fecowand achieves a sound insulation of $R_{w,P} = 47$ dB – naturally in fire resistance ratings up to EI90.

Only with the patented feco clip system are the wall panels invisibly clipped to the partition wall uprights by means of clip rails running along the entire length. The advantages as compared to a simple point fixture are:

Improved stability: The inserted full-length clip rails form a solid connection with the partition wall upright, thereby increasing the strength – as proven by tests according to DIN 4103.

More exact joints: At the same time, the partition wall panels are precisely fixed to prevent them moving sideways. This ensures longitudinal stability and, in particular, a precisely-fitting joint pattern.

Higher acoustic insulation: The full-length solid connections between the partition wall panels and the substructure result in excellent acoustic insulation.

Product features

- Moveable modular partition wall as solid wall
- Wall thickness 105 mm, for special versions 125-175 mm
- Slender 6 mm shadow gap between the elements
- Concealed fixture of all wall panels
- Recessed connections on floor, wall and ceiling
- Integrated negative base, no skirting board required
- Smooth ceiling connection as standard
- Substructure from system steel profiles
- Insulation with bio-soluble mineral fibrous sheet
- Covering from wood-based material, usually three-layered quality chipboard (for EI90 plaster composite materials)
- Standard surface finished with direct melamine resin coating, optionally laminate, real wood veneer, metal, fibreglass fabric, textile or varnish
- High level of prefabrication ensures short installation times
- Exceptionally high acoustic insulation by means of patented feco clip system with full-height clip rails
- Sound insulation test certificates for solid wall $R_{w,P} = 47$ dB up to 52 dB

Das Zeichen für verantwortungsvolle Waldwirtschaft

Förderung nachhaltiger Waldwirtschaft www.pefc.de

As a certified company, we can offer FSC®- and PEFC--certified certified solid walls and wooden door panels manufactured in our own factory.

The wall becomes
furniture.

fecoorga.

The organized office wall.

Organizable - the wall becomes furniture

System-integrated shelf supports and horizontal aluminium orga-profiles allow the system wall to be organized either vertically or horizontally, while numerous flexible, tool-free elements such as shelves and whiteboards are available for wall organization purposes.

With writeable and pinnable wall surfaces, the fecoorga element wall becomes a tool for agile working methods such as Scrum, Kanban and Design Thinking.

Inner connection - wall shell and partition wall uprights

The feco system partition wall convinces with its high workmanship quality. Steel retaining strips applied to the rear of the 19-mm wall shells at the factory create a linear connection with the upright profiles and ensure 6-mm system joints as standard.

Product features

- System-integrated wall organization
- Horizontal structure with aluminium horizontal joints as suspension rails, flush-mounted in the wall panelling
- Vertical organization with slotted upright substructure, suspension slits with 32 mm spacing in the 6 mm modular joints
- Structural certification for wall loading
- Consistent wall thickness of 105 mm

Calm in the office.

fecophon.

Optimized room acoustics.

Peace and quiet for concentrated work

Due to the omission of suspended ceilings in sustainably-planned office, administration and school buildings with concrete core temperature control ceilings, the acoustically-effective wall surfaces of system partition walls have gained enormously in importance.

A wide variety of porous absorbers ensure peace and quiet in the office, with perforated, slotted and micro-perforated wall surfaces improving the room acoustics. The uniform wall thickness of 105 mm achieves a sound insulation of up to $R_{w,P} = 47$ dB, whilst simultaneously absorbing sound on both sides.

By reducing the reverberation times, speech intelligibility is improved, facilitating communication and lessening the need to speak loudly. The improved acoustics have a positive effect on productivity.

Product features

The combination of glass sound shields to prevent sound propagation and acoustic absorbers allows open office concepts to be realized in which doors can be largely dispensed with.

fecophon wood

Wall-integrated absorbers fecophon wood are possible with one-colour decor or real-wood veneer surfaces. The base panel of the horizontally- or vertically-slotted fecophon absorbers can be natural MDF or dyed black to match the surface.

fecophon metal

Sheet-steel absorbers fecophon metal with perforated surfaces can also be used as magnetic surfaces.

fecophon fabric

Fabric-covered metal absorbers fecophon fabric convey a homely atmosphere with calming surfaces.

Nothing
but glass.

fecoplan.

The all glass system.

The all-glass construction

Only fixed to the floor and ceiling with slender aluminium profiles, the vertically frameless glass panes are reversibly glued with transparent tape.

50 mm connection profiles allow the acceptance of building tolerances and provide a stable connection. Corresponding element: The fecoplan system door-frame with integrated glass groove. Unique in the market due to its integrated aluminium technical panel for electrical installations and individual room signage. Innovation by feco.

Maximum transparency

The all-glass fecoplan partition wall system offers maximum transparency. The joints of the all-glass partition wall system are sealed with transparent glass adhesive tapes with passivated front edges as dry bonding, ensuring a uniform joint quality. In this way, the all-glass construction becomes a system partition wall solution that can be dismantled and reassembled.

Product features

- Central single-pane glazing as a post-free all-glass structure
- Aluminium retention profile with a width of only 50 mm
- Wall thickness of 35 mm
- Glass joints as translucent dry bonding
- Glass pane insertion of 18-25 mm according to TRLV
- Acceptance of building tolerance and movements of up to +/- 15 mm
- Aluminium door frame tapered to 70 mm with integrated glass groove
- Surfaces optionally finished with anodised aluminium or powder-coated in RAL-colours
- Design available as fall-protective glazing
- Sound insulation test certificates for glass wall $R_{w,P} = 35$ dB up to 42 dB

First-class

framework conditions.

fecofix.

Double glazing flush with the wall.

Exemplary sound insulation

The flush double glazing fecofix with its discreet, slender 20 mm aluminium profiles provides the appropriate framework for offices. Not a single joint disturbs the transparency. Due to its large cavity, the double glazing achieves exemplary sound insulation results of up to $R_{w,P} = 50$ dB.

Clean on arrival - factory cleaning of the inner pane surfaces

What is special about feco double glazing is that the panes are produced as closed glass elements in clean manufacturing conditions, transported to the construction site and assembled, with no need to clean the spaces between the panes after delivery since the inner pane surfaces are already clean. However, fecofix and fecostruct monoblock glass elements can still be opened for inspection purposes without having to be removed thanks to the carefully thought-out detail design.

Product features

- Double glazing flush with the wall
- Aluminium glass frame with a 20 mm width all-around
- Wall thickness 105 mm, flush with solid wall and door elements
- Undivided glass frame in the double glazing cavity (without a central joint)
- Prefabrication of the double-glazed elements ex works ensures the cleanliness of the internal glass surfaces
- Venetian blinds can be centrally integrated in the double glazing cavity
- Surfaces optionally finished with anodised aluminium or powder-coated in RAL-colour
- Use as fall-proof glazing possible
- Sound insulation test certificates for glass wall $R_{w,P} = 39$ dB up to 49 dB
- Sound insulation test certificates for top glazing wall $R_{w,P} = 39$ dB up to 50 dB

Frameless
glass visions.

fecostruct.

Frameless flush structural glazing.

The frameless flush fecostruct structural glazing meets exclusive design requirements.

Transparency and flushness are an expression of current architecture. In fecostruct they find their structural counterpart. Especially impressive is the glueing of the frameless flush glazing onto the concealed aluminium frame, which is only 20 mm wide. The result is completely level glass walls, which are fascinating and yet so natural.

Clean on arrival - factory cleaning of the inner pane surfaces

What is special about feco double glazing is that the panes are produced as closed glass elements in clean manufacturing conditions, transported to the construction site and assembled, with no need to clean the spaces between the panes after delivery since the inner pane surfaces are already clean. However, fecofix and fecostruct monoblock glass elements can still be opened for inspection purposes without having to be removed thanks to the carefully thought-out detail design.

Product features

- Flush single-pane or double glazing
- Frameless structural glazing construction method
- Glueing of glass panes onto aluminium base frame
- Width of glued area only 20 mm all-around
- Wall thickness 105 mm, flush with solid wall and door elements
- Permanent, UV-resistant, surface-homogeneous glueing
- Glass frame without a central joint in the double-glazing cavity
- Prefabrication of the double-glazed elements ensures the cleanliness of internal glass surfaces
- Venetian blinds can be centrally integrated in the double-glazing cavity
- Base frame from anodised aluminium, powder coated in RAL or veneered in natural oak, adhesive aluminium coloured or black
- Use as fall-proof glazing possible
- Sound insulation test certificates for glass wall $R_{w,P} = 39$ dB up to 47 dB
- Sound insulation test certificates for top glazing wall $R_{w,P} = 37$ dB up to 49 dB

The perfect fit
for every interior design.

fecotür doors. Please come in.

Variety of frames for all requirements

Numerous aluminium frame profiles have been developed for varying sound insulation and design requirements. Pressed solid aluminium brackets in the chambers of the aluminium frame profiles ensure permanently precise mitre corners.

Powder-coated steel frames with welded, ground mitre corners and height-adjustable frame shoes are also available. This robust solution is particularly appreciated in school construction. Common to all frames is the 3D-adjustable hinge support for the use of object door hinges.

Product features

fecotür wood

Wooden doors can be clad with visually-striking real wood veneer from feco's own factory.

fecotür H40 (bis $R_{w,p} = 37$ dB), H70-, H85- and H105 H70, H85 and H105 wooden door elements have been successfully tested as sound insulation doors up to $R_{w,p} = 42$ dB and more. The aluminium frame doors with wooden panelling can be used as flush door elements with concealed frames on the corridor side or as portal doors with technology door side panels. The H105 wooden door elements, which are flush on both sides, can include concealed hinges.

Fire protection requirements can also be met with wooden doors. T30 RS fire doors have been successfully tested and approved for use in F30 glass walls.

fecotür glass

A wide variety of glass door solutions are available for the feco partition wall system.

Swing door elements all-glass door fecotür G10, the aluminium frame glass door elements fecotür A40, A70 and A85, as well as the structural glazing door elements fecotür S70 and S105 in combination with our numerous aluminium door frames with sound insulation values (laboratory) of $R_{w,p}$ up to 42 dB.

Thus, we offer solutions for room-side or corridor-side or room and corridor flush doors, according to your design requirements. These are supplemented by the all-glass sliding door fecotür ST 10 B with a sound insulation value (laboratory) of $R_{w,p}$ up to 27 dB.
